Jetronics   **The Power To Connect**
India

Circular connectors are made in conformity to operating requirements of MIL 5015 specifications for various Industrial applications.

These connectors are known for their supreme reliability, high power carrying capacity, their inherent ruggedness and capacity to withstand extreme environmental conditions. Different insert layout as per MIL STD 1651A and different contact sizes allow carrying of current up to 150 amps. The standard MIL 5015 insert layouts permit mixing of power and signal contacts.

These connectors are available in the following locking arrangements:

- A. Thread coupled.
- B. Reverse bayonet coupled.

Both series of Connectors are manufactured from high grade aluminium for the shell hardware and neoprene rubber for the inserts. Pin and Socket contacts are usually silver plated and have solder and / or crimp terminations.

Both series of Connectors have an operating range of 200/3000 volts AC or 250/4200 volts DC at sea level. Different insert layouts permit multi pin arrangements up to 52 pins.

Both series of Connectors are available in various shell sizes ranging from 10 SL to 36 with the following styles:
